IN THE ABSTRACT

Please replace the Abstract with the attached revised Abstract located at the end of this document.

ABSTRACT OF THE DISCLOSURE

A semiconductor relay includes an essentially parallelepiped-shaped housing that has a fastening side and four lateral surfaces, which are perpendicular thereto, and has a front side, which is opposite the fastening side. These lateral surfaces and front side serve as connecting sides. At least one electrical connecting element and at least one mechanical connecting element for connecting a functional module, which can be connected to the housing, are provided on a number of connecting sides.
